LONG-FORM RESEARCH · IPO PROSPECTUS

Inside Anthropic's S-1: The Numbers Behind the Largest AI IPO

Anthropic, the developer of the Claude models, filed to list on Nasdaq as ANT on 26 October and updated its prospectus on 2 November. The filings show revenue of $33.2 billion in the first nine months of 2026, up more than tenfold, a first operating profit in the second quarter, nearly $900 billion of committed spending and a governance structure built around a Long-Term Benefit Trust. This report reads the prospectus for investors: growth, margins, losses, compute, customers, control, valuation and risks. It contains no recommendation.

Global Markets Research · Equity Strategy Desk Prepared by ANDRA MARKETS

~$4.6B

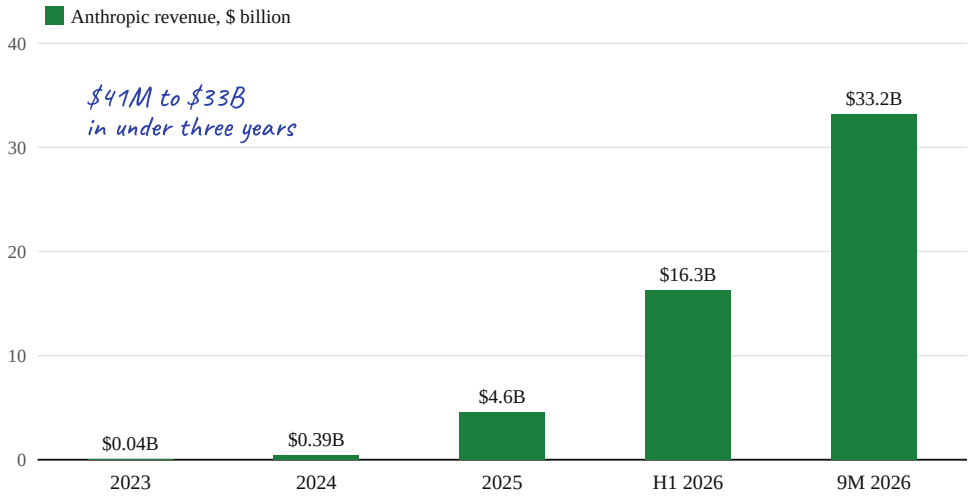

x10 in nine months

Coverage summary. Anthropic, PBC filed its Form S-1 on 26 October 2026 and an amendment on 2 November. Revenue reached $33.2B in the nine months to 30 September, against $4.6 billion in all of 2025 and $41 million in 2023. The second quarter alone brought in $11.6 billion, more than the company earned in its entire history to the end of 2025, and the third about $17 billion. Anthropic reported its first operating profit, $974 million, in the second quarter, then an operating loss of about $0.5 billion in the third after a $5 billion charge for short-term compute and $2 billion of non-cash donation-matching charges. The first-half net loss of $80.7 billion was almost entirely non-cash fair-value changes on convertible notes and other instruments. Against that, the company disclosed $895.4 billion of committed spending, mainly on compute, through 2045, $69.8 billion of it due in the next twelve months, and $131.7 billion of cash and investments. Goldman Sachs and Morgan Stanley lead a 22-bank syndicate; the price range is blank, and press reports put the potential valuation at $1.5 trillion to more than $2 trillion.

1.0 Executive Summary

Ten things the prospectus tells investors

1. Growth without precedent at this scale. Revenue rose from $1.16 billion in the first half of 2025 to $16.3 billion in the first half of 2026, about 1,300%, and to $33.2 billion over nine months. Customers paying $100,000 or more a year grew from about 950 to more than 11,900 in twelve months.

2. Margins inflected. Cost of revenue was $2.4 billion against $16.3 billion of revenue in the first half, an implied gross margin of about 85%, from roughly 40% in 2025 and about −95% in 2024. Adjusted operating income was $1.6 billion, a 10% margin.

3. The headline loss is mostly accounting. Of the $80.7 billion first-half net loss, $72.4 billion came from non-cash fair-value changes on convertible notes, derivatives and SAFEs. Operating cash flow was positive at about $3.9 billion.

4. The compute bill is the central risk. Committed spending totals $895.4 billion, primarily compute and infrastructure, with $447.5 billion due by 2030. Named contracts with Google, Amazon, Microsoft, SpaceXAI, Broadcom, Nscale and Lambda add up to roughly $637 billion; SpaceX alone will receive about $3.1 billion a month once capacity is delivered.

5. Enterprise-led and token-based. About 80% of revenue is consumption of tokens, 20% subscriptions; 48% runs through the cloud marketplaces of Amazon, Google and Microsoft, which are also shareholders and sell rival models. The top five customers are about 25% of revenue; none exceeds 10%.

6. Control stays with the founders and the Trust. Seven co-founders hold 50.1% of the vote through a single Class F share, and the Long-Term Benefit Trust elects a majority of the board. Public Class A shareholders get one vote per share.

7. The valuation question. The last private round valued Anthropic at $965 billion in May. A $1.5 trillion to $2 trillion IPO valuation would be roughly 22 to 29 times annualised third-quarter revenue, on our calculation.

8. Timing. The roadshow can start on 10 November; the earliest pricing date is 13 November and the earliest first trade 16 November, with Yahoo Finance pointing to 18 November on SpaceX's timetable, before Thanksgiving on 26 November.

9. Unusual risk factors. Besides customer concentration and regulation, the prospectus discusses scenarios in which AI could cause harm beyond what insurers could cover, a disclosure rarely seen in an IPO.

10. Our reading. The filing documents one of the fastest revenue ramps in corporate history and a business that has begun to earn money on operations, financed by obligations that dwarf current revenue. The investment debate is less about growth than about whether revenue can keep pace with committed compute through 2030.

2.0 The IPO

What, where, when and who

Anthropic confidentially submitted a draft registration statement on 1 June, days after raising $65 billion in a Series H round at a $965 billion post-money valuation. It made the filing public on 26 October and filed Amendment No. 1 on 2 November with nine-month figures. The company intends to list its Class A common stock on the Nasdaq Global Select Market under the symbol ANT; the number of shares and price range have not been set. Goldman Sachs and Morgan Stanley lead a syndicate of 22 banks. Net proceeds could be used for general purposes including acquisitions or investments, although the company says it has no agreements for any material deal. Under SEC rules, the roadshow can begin on 10 November, the earliest pricing date is 13 November and the earliest first trade 16 November. Before trading, all outstanding preferred stock, Series A through H, converts into Class A or Class N common stock.

Exhibit A. IPO timeline

Date	Event
28 May 2026	Series H: $65B at $965B post-money
1 Jun	confidential draft S-1 submitted
26 Oct	public S-1 filed; Nasdaq, ticker ANT
2 Nov	Amendment No. 1 with nine-month results
10 Nov (earliest)	roadshow can begin
13 Nov (earliest)	pricing
16-18 Nov (earliest / SpaceX pace)	first trade
26 Nov	Thanksgiving; practical deadline

2.5 How Anthropic Makes Money

The business model in plain words

Anthropic trains large AI models, the Claude family, and charges for their use. Most revenue comes from businesses and developers who send text, code or images to Claude through an API and pay per token, the small chunks of text the model reads and writes. A coding agent, Claude Code, which plans, writes, tests and commits software alongside developers, has become one of the largest sources of token consumption. The rest comes from subscriptions for individuals and teams. Claude is sold directly and through the three largest cloud platforms. Costs are dominated by compute: chips, data centres and power, both to serve customers and to train new models. The economics depend on revenue per unit of compute rising faster than the cost of compute, which is why each new model generation that cuts cost per task matters to investors.

tokens in, tokens out

Unlike consumer-first AI companies, Anthropic built its revenue on enterprises. The prospectus describes customers using Claude in three ways: to make employees more productive, to speed up processes and to embed intelligence in their own products. Much adoption has been organic, with individuals using Claude at work before their companies sign contracts. Analysts estimate that about three quarters of first-half revenue came from accounts paying at least $100,000 a year.

enterprise first

~$100k

Exhibit B. Anthropic in brief: a timeline

Year	Milestone
2021	founded as a public benefit corporation by former OpenAI researchers, including Dario and Daniela Amodei
2023	first Claude models; revenue $41M; investment agreements with Amazon and Google
2024	revenue $386M; Claude 3 family; gross margin still negative
2025	revenue $4.6B; Claude Code launched and scaled; $1.5B copyright settlement; ~40% implied gross margin
May 2026	Series H: $65B at $965B
Jun 2026	confidential IPO filing
Q2 2026	first operating profit ($974M)
Oct-Nov 2026	public S-1, amendment, roadshow

Sources: Anthropic S-1 and newsroom; press reports. Simplified.

3.0 Growth

The revenue curve

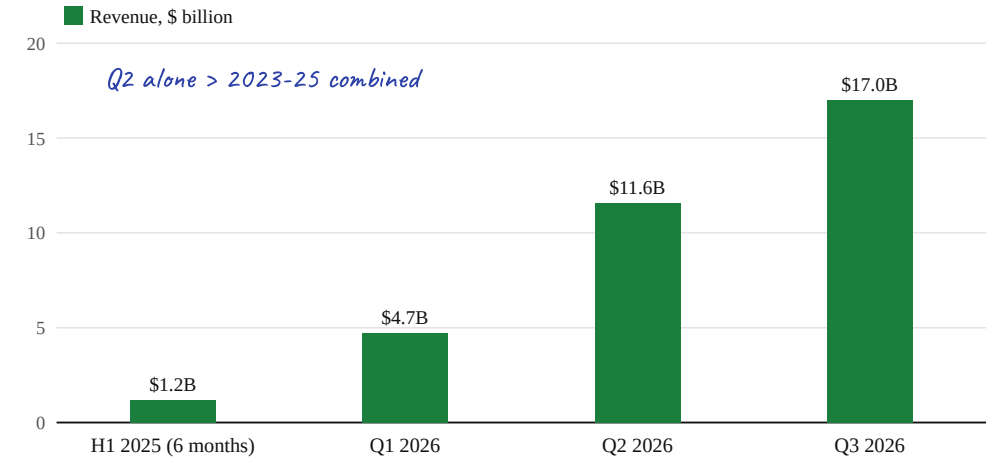

~$41M

Anthropic's revenue was $41 million in 2023, $386 million in 2024 and $4.585 billion in 2025. In 2026 it reached about $4.7 billion in the first quarter, derived from first-half revenue of $16.3 billion and second-quarter revenue of $11.56 billion, and about $17B in the third, according to the amended filing. Second-quarter revenue grew 1,368% from a year earlier while compute and infrastructure expenses grew 300%. Third-party analysts attribute much of the acceleration to enterprise and coding

Q2 > history

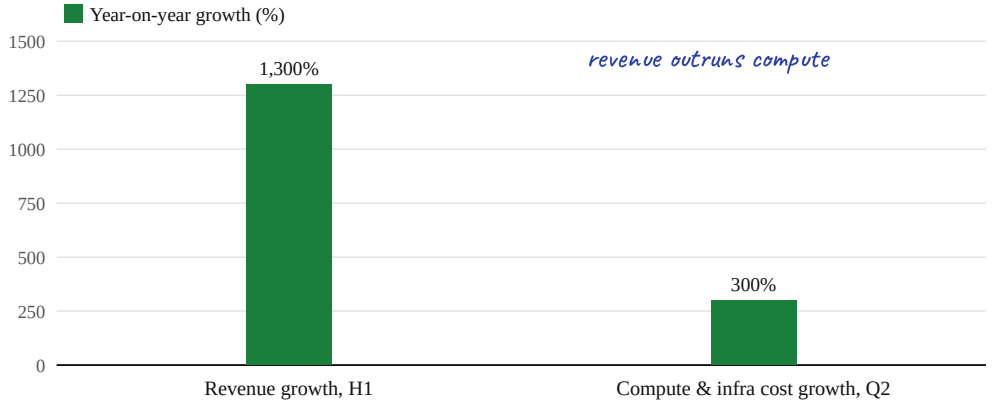

workloads, with agents multiplying the tokens consumed per task; Claude Code was estimated at about $8 billion of annualised revenue in May. Annualising the third quarter implies a run rate near $68 billion, although the prospectus leaves its own run-rate figure blank.

Exhibit 2. Quarterly revenue ($ billion)

Sources: Anthropic S-1 (H1 2025, Q2 2026); Q1 2026 derived; Q3 2026 from the amended S-1 via ValueAdd VC (about $17.0B). H1 2025 is a six-month figure.

Exhibit 3. Growth: revenue vs compute and infrastructure costs (% year on year)

Source: Anthropic S-1 via The VC Corner (H1 revenue growth ~1,300%; Q2 compute and infrastructure cost growth 300%).

4.0 Margins and Profit

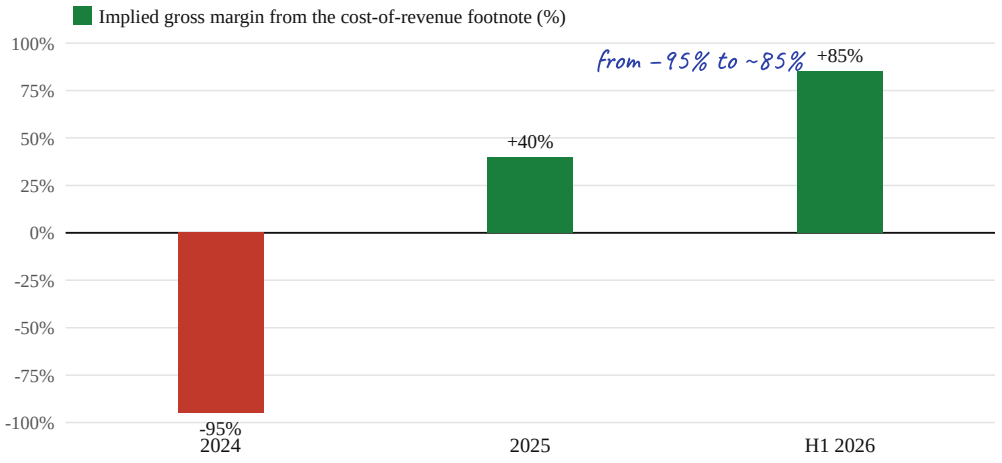

From losses to an operating profit, briefly

~$16B

Anthropic no longer reports gross margin on its income statement, having switched to presenting expenses by nature (compute, personnel, sales and marketing), but a footnote still discloses cost of revenue: $2.38B against $16.3 billion in the first half, implying a gross margin of about 85%, up from roughly 40% in 2025 and −95% in 2024. Analysts caution that the figure is a functional margin for serving customers, not the full cost of compute including research and training, and that revenue booked gross through cloud marketplaces inflates the top line: net of the cloud providers' cut, first-half revenue would be closer to $13.6 billion and a 'loaded' margin nearer 65%. Adjusted operating income was $1.6 billion in the first half, a 10% margin, and GAAP operating income turned positive at $974 million in the second quarter, an 8.4% margin.

85% implied

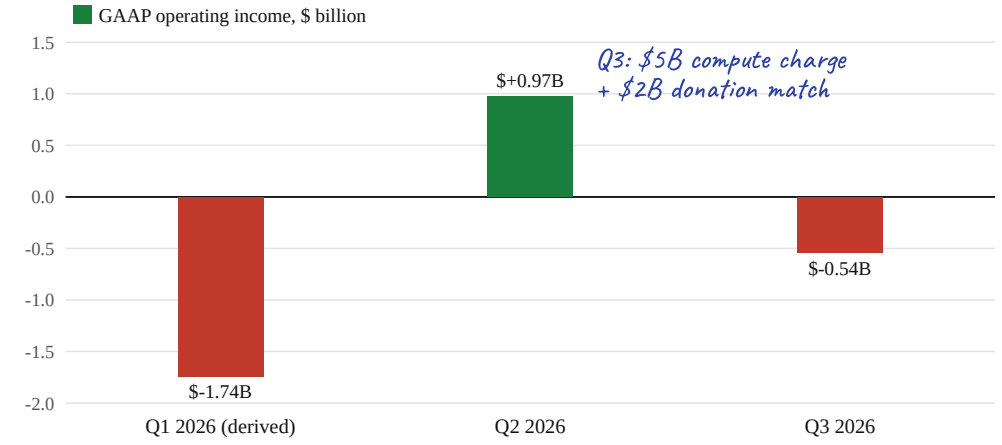

Exhibit 4. Implied gross margin (%)

Sources: Anthropic S-1 Note 8 (cost of revenue) via Mostly Metrics, BuildMVPFast and Deepak Gupta; Andra Markets presentation.

The third quarter returned to an operating loss of roughly $0.5 billion, which the company attributes to a $5 billion charge for compute under short-term commitments and $2 billion of non-cash charges from its donation-matching programme. Over nine months the operating loss narrowed to $1.3 billion from $5.2 billion a year earlier. Full-year 2025 included an operating loss of $8.1 billion, with a $1.5 billion copyright settlement. Operating profitability is real but not yet stable: it depends on how much compute the company buys ahead of demand.

Exhibit 5. GAAP operating income by quarter ($ billion)

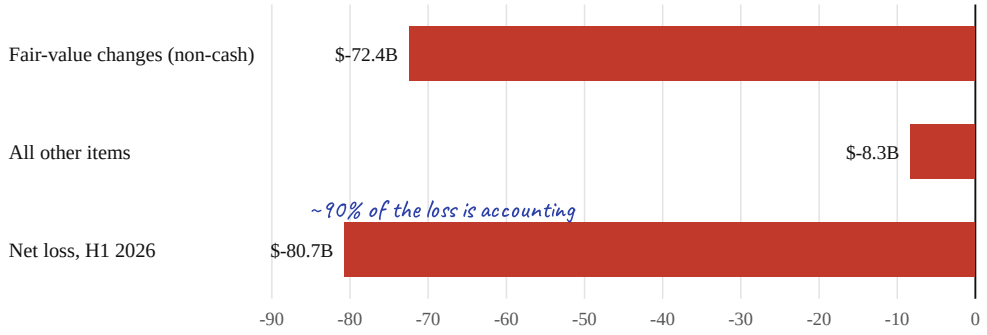

Sources: Anthropic S-1 and S-1/A via The VC Corner and Yahoo Finance (Q2 $974M; Q3 about −$536M to −$567M); Q1 derived from the nine-month total of −$1.3B.

5.0 The $80.7 Billion Loss

Why the headline number misleads

The first-half net loss of $80.7 billion is the largest in the prospectus and the least informative. Some $72.4B of it reflects changes in the fair value of convertible notes, derivative liabilities and SAFEs, instruments whose accounting value rises as the company's valuation rises; these convert into equity at the IPO and the charges do not involve cash. The remaining $8.3 billion includes operating items and stock-based compensation. Operating cash flow over the same half was positive at about $3.9 billion. Investors should look at operating income and cash flow, not net income, until these instruments convert.

Exhibit 6. Bridge of the first-half 2026 net loss ($ billion)

Source: Anthropic S-1 (p. 23) via The VC Corner; 'all other items' derived.

5.5 Revenue Quality and Cash

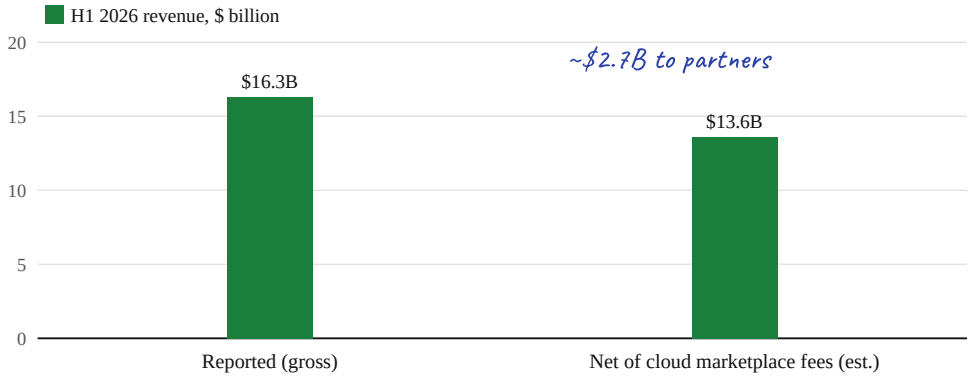

Gross, net and what reaches the bank

gross vs net

Two adjustments help read the top line. First, because Anthropic books cloud-marketplace sales gross and pays the platform fee as a cost, analysts estimate first-half revenue at about $13.6B net of those fees, against $16.3 billion reported. Second, receivables are concentrated in the same channel: 58% sit with the marketplaces, which means the cloud partners collect and remit a large share of the cash. Cash generation is nonetheless positive: operating cash flow was about $3.9 billion in the first half, and cash and short-term investments reached $131.7 billion after the Series H and earlier rounds. Cash covers almost two years of near-term compute obligations, before any IPO proceeds.

Exhibit 8. Cash, cash flow and near-term obligations ($ billion)

the runway

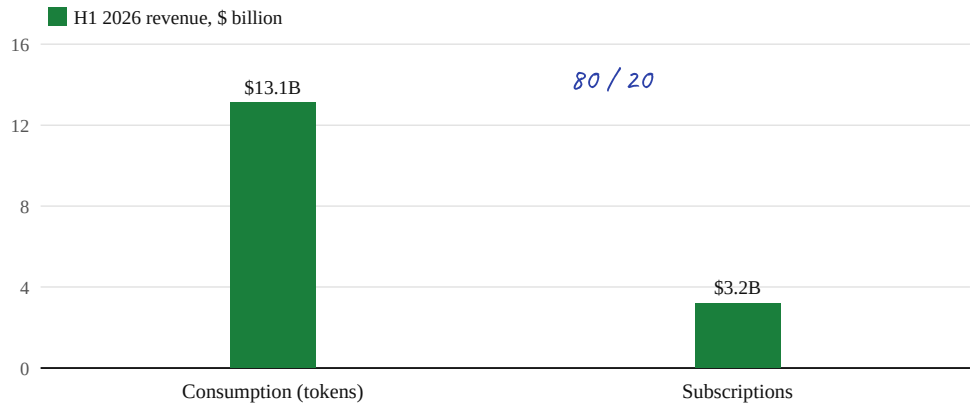

Sources: Anthropic S-1 and S-1/A via BuildMVPFast, The VC Corner and Yahoo Finance.

6.0 Customers and Revenue Mix

Who pays and how

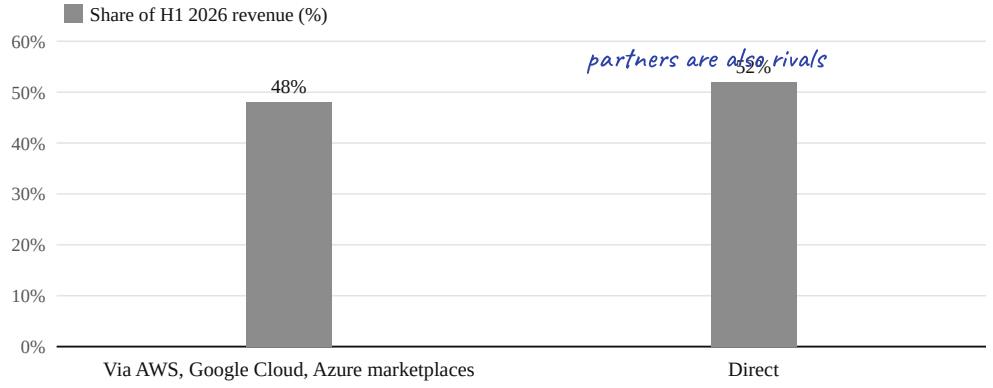

Anthropic sells intelligence by the token. In the first half, consumption revenue, which the company calls pay-for-intelligence, was $13.1B or 80% of the total, and subscriptions to Claude Pro, Max, Team and Enterprise plans were $3.2 billion or 20%. About 48% of revenue, and 58% of receivables, came through the marketplaces of AWS, Google Cloud and Azure; Anthropic usually keeps a separate contract with the end customer and books the revenue gross. More than 14,000 enterprise customers use Claude, about 250 pay $10 million or more a year, and customers paying at least $100,000 grew from more than 950 to more than 11,900 in a year. Net revenue retention was about 900%, meaning existing customers spent roughly nine times more than a year earlier. The top five customers accounted for about 25% of nine-month revenue and none for more than 10%.

Exhibit 12. Customer concentration, nine months to 30 September 2026 (%)

Source: Anthropic S-1 risk factors via Deepak Gupta and Tomasz Tunguz.

7.0 People and Productivity

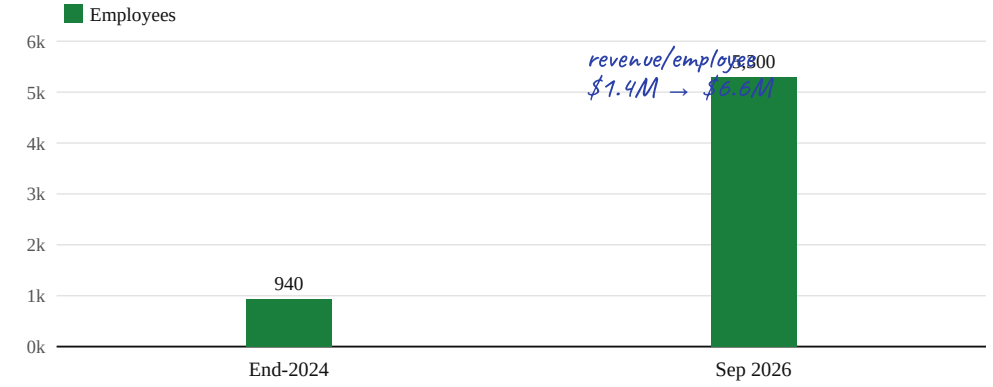

A small company with a very large P&L

~$1M

Anthropic had about 5,300 employees at 30 September, up from about 940 at the end of 2024. Trailing revenue per employee exceeded $6.6M, up from $1.4 million a year earlier; Yahoo Finance notes that only Nvidia among the Magnificent Seven generates more. Multiplying the two figures implies trailing-twelve-month revenue of roughly $35 billion, consistent with the nine-month total. The company also launched Ode, an AI services company with private equity partners, to bring Claude to mid-sized businesses, and says Claude Opus 5.5 cut customer costs per task by about 40% compared with Opus 5.

$6.6M per employee

Exhibit 13. Employees

Sources: Anthropic S-1 via Mostly Metrics.

8.0 Compute: The $895 Billion Question

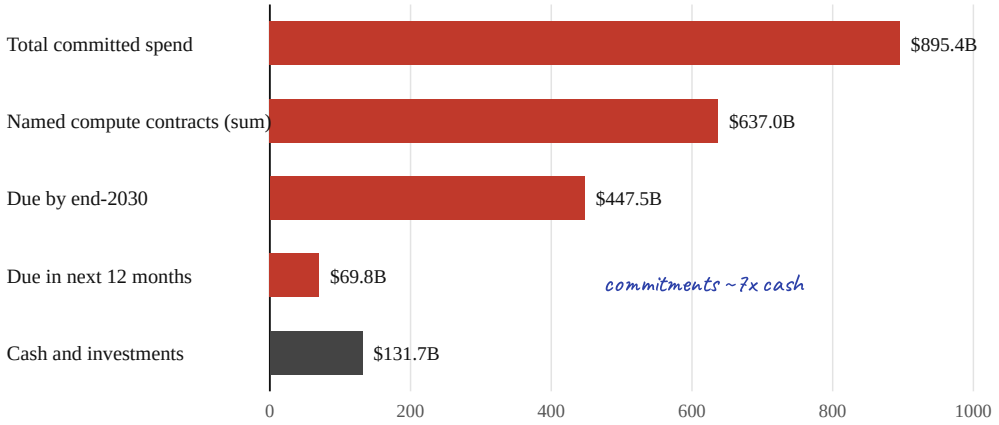

Obligations, partners and power

$895B to 2045

The amended filing puts aggregate committed spending at $895.4B, primarily for compute and infrastructure: $69.8 billion is due in the next twelve months, $447.5 billion by the end of 2030 and the rest between 2031 and 2045. The original filing named contracts with Google, Amazon, Microsoft, SpaceXAI, Broadcom, Nscale and Lambda totalling about $637 billion, and analysts estimate that roughly two-thirds of commitments are non-cancellable. Anthropic will pay SpaceX about $3.1 billion a month for access to Nvidia-powered compute once all promised capacity is delivered, and it is leasing data centres to reduce reliance on Amazon and Google. Yahoo Finance highlights natural gas as a power bottleneck flagged in the filing. Against these obligations the company holds about $131.7 billion of cash and short-term investments. The commitments are about 27 times 2025 revenue and 13 times the annualised third quarter, which is why the IPO is in effect a financing for compute.

~$70B

Exhibit 14. Committed spending vs cash ($ billion)

~7x cash

Sources: Anthropic S-1/A via Yahoo Finance (total, 2030 and 12-month figures); The VC Corner (sum of named contracts, cash and investments).

partners = rivals

The compute relationships create unusual interdependence. Amazon, Google and Microsoft hold equity in Anthropic, sell its models through their clouds, buy Claude for their own use and sell competing models; the filing notes that the distribution deals give them visibility into Anthropic's pricing and commercial terms. Amazon and Alphabet are among the largest beneficiaries of the IPO. For the hyperscalers discussed in Andra Markets 2026-73, Anthropic is simultaneously a customer that fills their data centres, an investment marked on their balance sheets and a competitor.

8.5 Who Benefits From the IPO

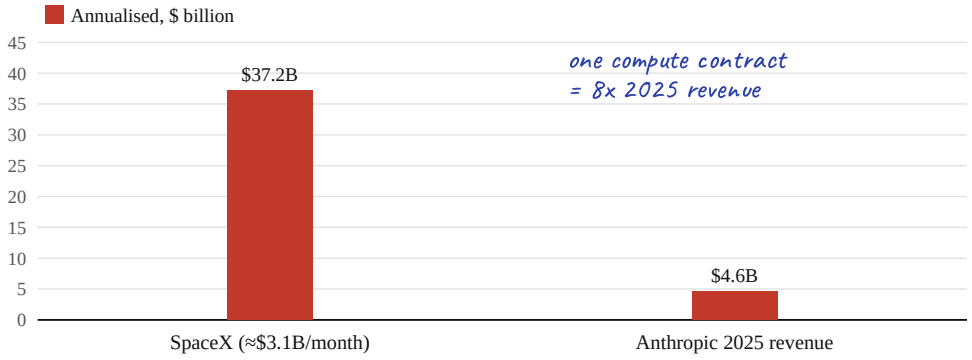

Partners, suppliers and banks

Amazon, Alphabet

~$68B

The listing would crystallise gains for Anthropic's largest backers. Yahoo Finance identifies Amazon and Alphabet as likely winners; both are large shareholders and both recorded large gains on their stakes this year, as Andra Markets 2026-73 noted, with Amazon's non-operating income of $68 billion in nine months mostly reflecting Anthropic. Funds managed by Fidelity and Blackstone also stand to gain, and some shareholders sold part of their holdings in an April tender offer. Suppliers benefit from the commitments: SpaceX's roughly $3.1 billion a month for Nvidia-powered capacity annualises to about $37B, eight times Anthropic's 2025 revenue. Underwriters led by Goldman Sachs and Morgan Stanley would earn fees on one of the largest offerings ever.

Exhibit 15. One compute contract vs 2025 revenue ($ billion, annualised)

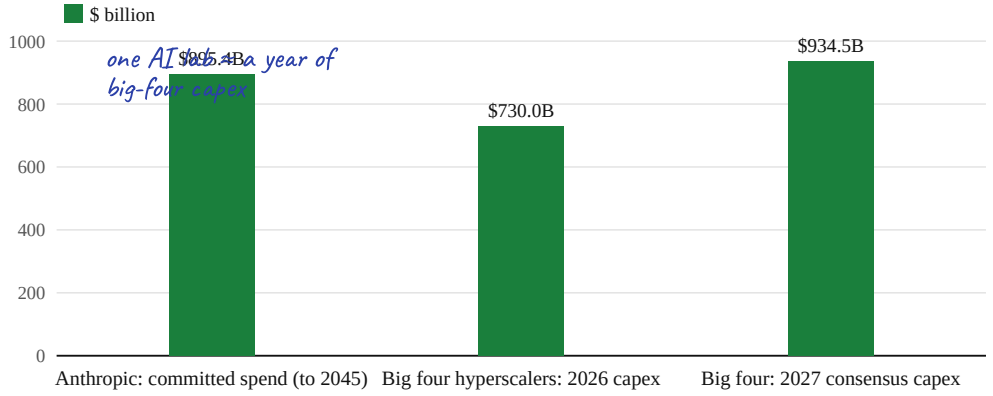

Sources: Anthropic S-1 via CNBC (SpaceX about $3.1B a month once capacity is delivered); Anthropic 2025 revenue. Andra Markets annualisation.

~$895B

To put the commitments in context: Anthropic's committed spending of about $895 billion over two decades is comparable to a full year of capital expenditure by Amazon, Alphabet, Microsoft and Meta combined, which is guided at about $730 billion for 2026 and expected near $935 billion in 2027. Its revenue growth, meanwhile, is an order of magnitude faster than that of the cloud businesses supplying it.

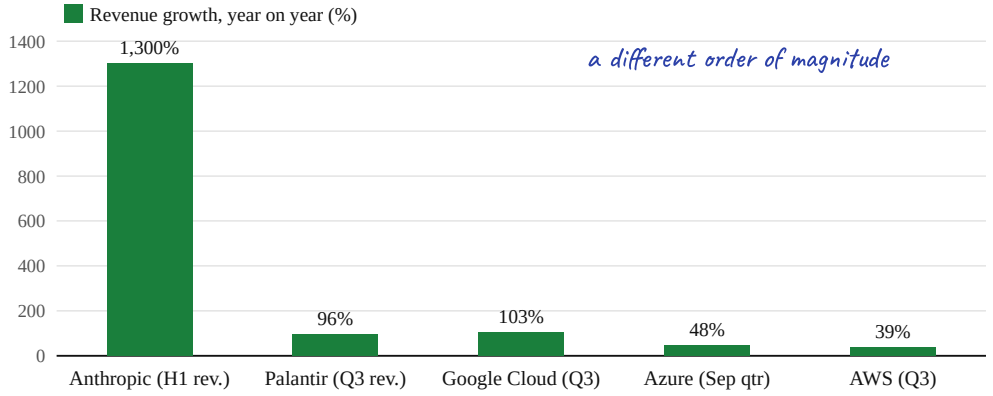

context

Exhibit 16. Anthropic's commitments vs hyperscaler capex ($ billion)

Sources: Anthropic S-1/A; Andra Markets 2026-73 (FactSet, company guidance).

Exhibit 17. Revenue growth in the latest reported period (% year on year)

Sources: Anthropic S-1 (H1 2026); Palantir, Alphabet, Microsoft and Amazon Q3 2026 results.

9.0 Governance

Who controls a public Anthropic

The share structure keeps control with insiders and a mission-focused trust. Public investors buy Class A shares with one vote each. Seven co-founders hold 50.1% of the voting power through a single Class F share held by a founder LLC. The Long-Term Benefit Trust, an independent body Anthropic created to oversee its public-benefit mission, elects a majority of the board. The company has also issued Class N shares equal to 5% of fully diluted shares to the Anthropic Public Benefit Fund, a subsidiary, and the board may issue up to 2% more each time the share price rises 50% above the prior milestone, starting from the IPO price. As a public benefit corporation, Anthropic's directors must balance shareholders' financial interests with its stated public benefit.

Exhibit C. Share classes after the IPO, as described in the filing

Class	Holders	Votes	Notes
Class A	public investors; converted preferred	one per share	listed on Nasdaq as ANT
Class F	Founder LLC (seven co-founders)	50.1% of total voting power	single share
Class N	Anthropic Public Benefit Fund; some converted preferred	as set out in the filing	5% of fully diluted at IPO; +2% per 50% price milestone
Board	majority elected by the Long-Term Benefit Trust	n.a.	public benefit corporation

Sources: Anthropic S-1 via The VC Corner and MicroVentures. Simplified; see the prospectus for full terms.

10.0 Valuation

What a $1.5-2 trillion price would imply

22-29x run rate

~$1.5T

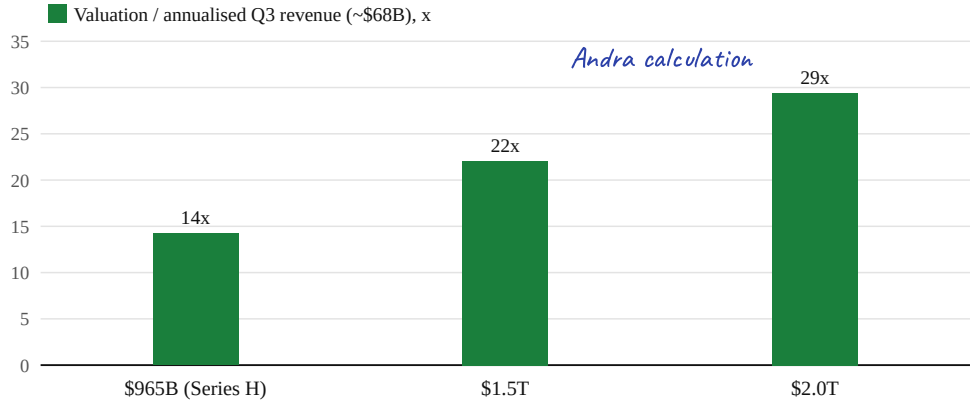

The prospectus does not state a valuation. The Wall Street Journal has reported a range of $1.5 trillion to $2 trillion and NBC News more than $2 trillion, against $965 billion in the May Series H. On our arithmetic, annualising third-quarter revenue of about $17 billion gives roughly $68 billion; a $1.5 trillion valuation would be about 22x that run rate and $2 trillion about 29x. Those multiples are below Palantir's roughly 50 times guided 2026 revenue but far above large software companies, and they assume growth continues at a pace that would make Anthropic one of the largest companies in the world by revenue within a few years. History counsels caution: of more than 9,000 US IPOs from 1975 to 2021, about 60% traded flat or lower three years after their first-day close, according to Jay Ritter's data, and SpaceX, which rose 20% on its first day in June, fell 15% in its first week after joining the Nasdaq-100.

Exhibit 18. Valuation: last private round vs reported IPO range ($ trillion)

Sources: Anthropic (Series H); Wall Street Journal and NBC News via MicroVentures, The VC Corner and Yahoo Finance. IPO figures are press reports, not company guidance.

Exhibit 19. Valuation as a multiple of annualised Q3 2026 revenue (x)

Source: Andra Markets calculation using Q3 2026 revenue of about $17.0B x 4. Illustrative only; not a valuation opinion.

10.5 Precedents

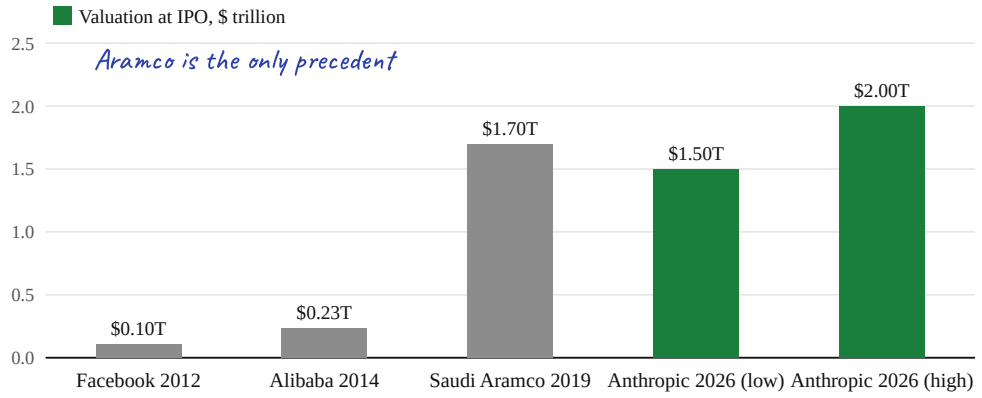

Mega-IPOs and what followed

only Aramco was bigger

~$1.7T

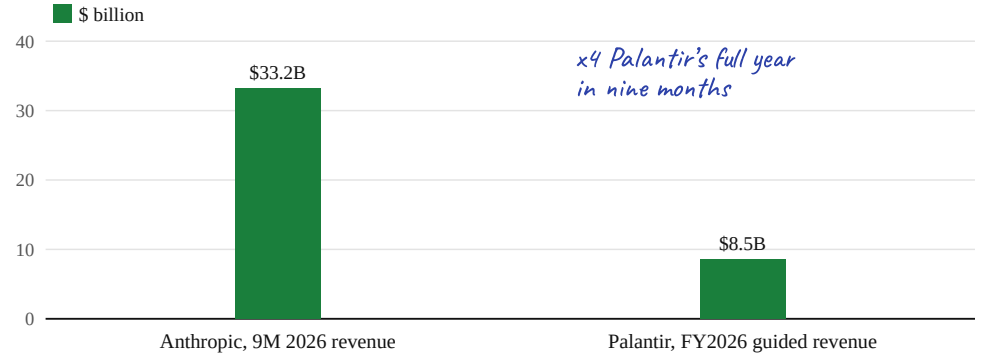

Only one IPO has valued a company in the range reported for Anthropic: Saudi Aramco, listed in December 2019 at about $1.7 trillion. Facebook listed in 2012 at about $104 billion and fell roughly half within months before recovering; Alibaba's 2014 listing at about $231 billion was then the largest IPO by proceeds. SpaceX, which listed in June this year at $150 a share, rose 20% on its first day and then fell 15% in its first week after joining the Nasdaq-100. Large IPOs tend to be priced for the story, and the first year often tests it. Anthropic would be the first frontier AI developer to report quarterly as a public company, which will make every quarter a referendum on the AI build-out.

Exhibit 20. Valuation at listing, selected mega-IPOs ($ trillion)

Sources: widely reported IPO valuations (Facebook, Alibaba, Saudi Aramco); Anthropic range from press reports (WSJ). Illustrative.

Exhibit 21. Scale comparison ($ billion)

Sources: Anthropic S-1/A; Palantir Q3 2026 results (FY2026 guidance midpoint).

11.0 Risks

What the prospectus warns about

read twice

The risk factors run to dozens of pages. The most material for investors are: the compute obligations, owed whether or not demand materialises; dependence on three cloud partners that are also competitors and shareholders; competition from OpenAI, Google and open-weight models, with token prices falling; consumption-based revenue without long-term lock-in; customer concentration, with the top five at about 25%; regulatory risk, which Anthropic describes as increasingly restrictive; legal risk, including copyright, after a $1.5 billion settlement in 2025; and control, with public shareholders holding a minority of votes. The filing also discusses scenarios in which advanced AI causes serious harm, potentially beyond what insurance markets could cover, consistent with chief executive Dario Amodei's public warnings about the pace of frontier development. Few prospectuses ask investors to weigh risks to the world as well as to the company.

~25%

Exhibit D. Key risks and what to watch

Risk	Why it matters	Signal to watch
Compute commitments	~$895B committed, ~2/3 non-cancellable (est.)	revenue growth vs annual obligations
Cloud partner dependence	48% of revenue via AWS, GCP, Azure	marketplace share; pricing terms
Pricing pressure	token prices falling industry-wide	revenue per customer; cost per task
Concentration	top five ~25% of revenue	quarterly disclosure
Regulation	'increasingly restrictive' AI rules	US and EU legislation
Governance	founders 50.1% of votes; LTBT elects board majority	board decisions vs shareholder interests
Volatility after listing	index inclusion, lock-up expiries	first-week trading; lock-up dates

Sources: Anthropic S-1 risk factors as summarised by Yahoo Finance, Deepak Gupta, Tomasz Tunguz and others; Andra Markets selection.

12.0 What It Means

For markets and for the AI trade

~$900B

Anthropic's listing would give public investors the first direct exposure to a frontier AI model developer at scale, and its quarterly reports would become a reference point for the whole AI trade. Its numbers support the demand side of the story told by the hyperscalers: rapid revenue growth, improving margins and strong enterprise adoption. They also make the financing side concrete: nearly $900 billion of commitments, largely to the same cloud companies whose own capex and cash flow were questioned this month. A strong listing would validate the build-out; a weak one would raise the cost of capital for everyone building it, from neoclouds to chipmakers. Index funds would likely be forced buyers after inclusion, as with SpaceX, which can distort early trading.

the AI trade's new benchmark

Exhibit E. Scenarios for the listing and the first year

Scenario	What happens	What it would signal
Strong demand	prices at or above the reported range; revenue keeps growing quickly	investors willing to fund AI compute through equity
Orderly listing	prices within range; trading volatile around index inclusion	valuation debate continues quarter by quarter
Weak reception	priced below range or delayed	higher cost of capital across the AI chain

Andra Markets scenarios; no probabilities are assigned. This is not a recommendation to buy, sell or subscribe to any security.

Exhibit F. The S-1 in twenty numbers

13.0 Investor FAQ

Short answers from the filing

~$974M

Is Anthropic profitable? Operationally, briefly: it earned $974 million of GAAP operating income in the second quarter, but returned to an operating loss in the third because of compute and donation charges. Net income is deeply negative because of non-cash fair-value charges that disappear when

Q1

convertible instruments convert at the IPO.

How fast is it growing? Revenue grew about 1,300% in the first half and more than tenfold over nine months, to $33.2 billion. Growth at that rate cannot continue indefinitely; the question is how quickly it slows.

What is the biggest risk? The size of compute commitments relative to revenue: $895 billion committed, $70 billion due in the next twelve months, against an annualised revenue run rate near $68 billion.

Who controls the company? The co-founders hold 50.1% of the vote through a Class F share and the Long-Term Benefit Trust elects a majority of the board. Public shareholders will not control the company.

When can it trade? No earlier than 16 November under SEC rules, more likely around 18 November if it follows SpaceX's timetable, and before Thanksgiving on 26 November. The price range will appear in a further amendment.

Should retail investors buy at the IPO? This report does not make recommendations. It notes that IPO allocations favour institutions, that first-day prices can be volatile and that historically most IPOs traded flat or lower three years later.

Exhibit G. Glossary

Term	Meaning
S-1 / S-1/A	the IPO registration statement and its amendments filed with the SEC
Token	a unit of text a model reads or writes; the basis of usage pricing
Net revenue retention	revenue from existing customers now vs a year ago; 900% = 9x
Run rate	a period's revenue annualised, e.g. a quarter x 4
Fair-value change	non-cash accounting gain or loss on instruments such as convertible notes
Committed spend	contractual obligations to pay suppliers, here mainly for compute
Public benefit corporation	a company whose directors must weigh a stated public benefit alongside shareholder value
Long-Term Benefit Trust	an independent body that elects a majority of Anthropic's board
Lock-up	period after an IPO when insiders cannot sell
Roadshow	marketing meetings with investors before pricing

Methodology and Source Notes

Method. This report summarises Anthropic's Form S-1 (26 October 2026) and Amendment No. 1 (2 November 2026) as reported by Yahoo Finance, CNBC and independent analysts, together with press reports on valuation and timing. Some figures are derived or approximate and are labelled. Valuation multiples are illustrative Andra Markets calculations. Disclosure: Andra Markets prepares its research with the assistance of AI tools, including Claude, which is developed by Anthropic, the subject of this report. This is not an offer, solicitation or recommendation regarding any security. Handwritten notes and highlights are informal commentary by the desk. This note is analysis, not investment advice.

Principal sources.
